Your light Your way

INTRODUCTION:

ESCO Light Fittings and Fixtures Trading LLC is an esteemed entity in lighting solutions, crafting elegance, and innovation in every glow. In 2021, ESCO was founded, with headquarters established in the vibrant cityscape of Dubai, UAE.

Unwavering commitment is our principle to ensure excellence in our three distinctive specializations within the lighting industry

- Visionary lighting design.
- Bespoke decorative lighting solutions.
- Indoor and outdoor diverse range of architectural lighting fixtures.

OUR MISSION AND VISION:

Our mission is to transform ordinary space into breathtaking realms of luminary artistry.

Our vision is to redefine the way that light interacts with architectural surroundings, influencing everything around, and creating a symphony of emotions and experiences.

OUR KEY VALUES:

- **Innovation:** we craft lighting solutions unified with creativity, transcending the ordinary and paving the way for brilliance beyond expectations.
- **Excellence:** we care about the completion of innovative creations to ensure exceptional quality.
- **Expertise:** Our project focuses on crafting custom-made chandeliers with creativity and professionalism in UAE and GCC countries guided by a futuristic vision aimed at achieving global recognition. We consistently aim to get the perfect results through accurate maintenance and continuous monitoring.

UNVEILING UNIQUENESS:

Our commitment to bridging the gap between luxury and affordability makes us unique. We serve our discerning clients who seek a harmonious blend of exceptional craftsmanship and a justifiable price point.

OUR SERVICES:

1- LIGHTING DESIGN:

where aesthetics meet functionality.

ESCO's approach represents both
artistry and science.

Our dedication is to elevate the
spatial experience through carefully
crafted lighting solutions that not
only illuminate but also add intrinsic
value to our clients' projects.

• Comprehensive Process

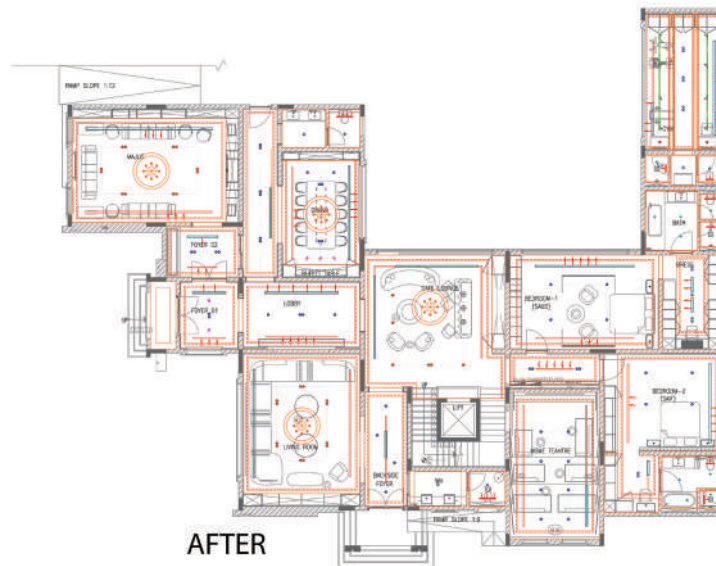

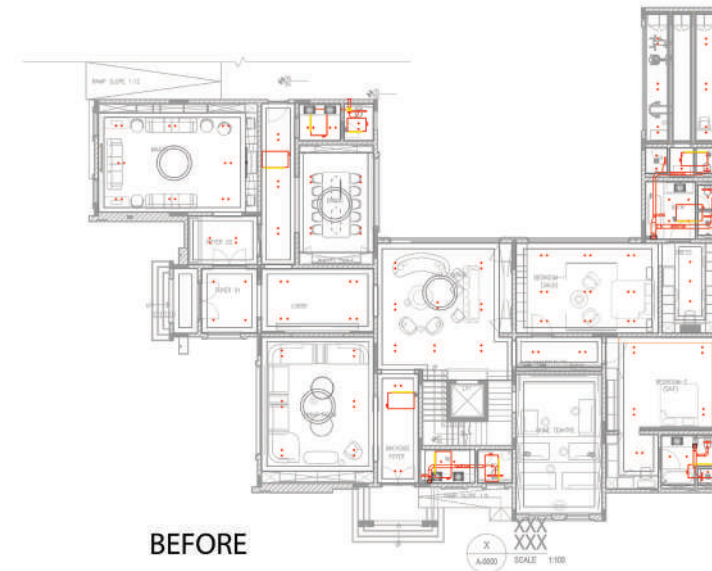

Our process begins with a comprehensive understanding of the project's core function, the conceptual design framework as well, and the particular needs and requirements of our client.

• Detailed Analysis

The completion will be achieved through a full-detailed study of the space, analyzing the interaction between architectural elements and the natural lights' effects at different times of the day.

This lets us make the best decisions regarding the optimal placement, intensity, and type of artificial lighting needed.

www.escolights.com

- **Advanced Techniques**

Also, we use advanced techniques in order to determine the suitable lux levels for different spaces, while making sure that the lighting serves its functional role while impacting the overall ambiance.

- **Main Objective**

And so, our main objective is crafting lighting designs that not only have ideal visuals, but also align with the functional needs of our client's project.

This shows the best combination between technical aspects and aesthetic considerations.

2- ARCHITECTURAL LIGHTING:

We provide high-end quality products, considering the area where the fixtures will be placed. Our products meet safety measurements and feature high CRI and UGR factors specs.

Safety is one of the main crucial standards within our product range. We also assign importance to safety measurements to ensure that each fixture meets the industry instructions. Additionally, our products are provided with advanced features, such as high Color Rendering Index (CRI) values for true-to-life color reproduction, and prime Unified Glare Rating (UGR) factors to reduce visual discomfort.

By focusing on these main aspects which are quality, safety, and high-performance features.

We aim to provide architectural lighting solutions that work on illuminating and elevating the space at the same time. Through this accurate approach, we ensure that our lighting products will contribute to creating both, functional and aesthetic environments.

3- CUSTOM-MADE LIGHTING:

For us, each project tells a unique story.

We craft authentic pieces by considering the interior design theme, proposing our concept, creating samples, and doing elegant installations with a high-end finish.

- **Consultation and Needs Analysis**

Our journey begins with an initial detailed consultation, where we discuss with our clients to comprehend the project's unique requirements, aesthetic visions, and functional needs. This phase allows us to collect critical information about the space, such as dimensions, color schemes, used materials, and the intended environment.

www.escolights.com

- **Conceptualization and Design Proposal**

After collecting information, our design team starts creating a conceptual framework that emphasizes the project's overall design theme. We construct mood boards, sketches, and even 3D renderings to provide a visual representation of the proposed lighting elements.

This conceptual plan serves as the base on which the final design will be applied.

• Material Selection and Prototyping

Selecting the best materials is an important phase in our process. We carefully choose high-quality materials that meet safety standards and contribute to improving the visual and functional effectiveness of the final product.

After that, we create prototypes, and samples to test the design in real-world conditions.

This approach includes multiple rounds of modifying to combine the design, and ensuring it meets both aesthetic and functional benchmarks.

www.escolights.com

- **Technical Characteristics and Safety**

Beyond visual aesthetics, we pay exact attention to technical matters. Each custom-made fixture is designed with the best electrical characteristics, including wattage, voltage, and luminous efficacy.

We also focus on achieving high Color Rendering Index (CRI) values and appropriate Unified Glare Rating (UGR) factors. Each product undergoes thorough testing to ensure they meet the industry safety standards.

- **Installation and Quality Assurance**

The installation phase is carefully executed with our team made up of skilled technicians and craftsmen working in harmony and unity to ensure that each fixture is installed considering the accurate characteristics that elevate both functional and aesthetic impacts.

Post-installation, we organize a thorough quality assurance check, ensuring that every element meets the high standards we set for ourselves and the expectations of our clients.

www.escolights.com

- **Maintenance**

Our commitment to quality extends beyond the installation. We offer comprehensive aftercare services, including maintenance plans and periodic checks, to ensure the stability and performance of our custom-made lighting solutions.

Craftsmanship is the essence of Excellence:

We care to showcase our superior craftsmanship, starting from the creative designs to our commitment to service and maintenance through our regular care.

OUR CULTURE TOWARDS THE FUTURE:

ESCO conveys a representation of our culture by honoring the essence through creating pioneering designs for every era. Our vision is not only limited to expanding this culture within the UAE, but also look forward to expanding and opening a branch in the KSA.

OUR CLIENTELE:

Our clients are our partners. They vary in their vision and personas as they seek the perfect lighting solutions.

We always identify the right and best solutions to ensure our partners' satisfaction.
